

Sample Question Format

KIIT Deemed to be University **Online Mid Semester Examination(Spring Semester-2022)**

Subject Name & Code: DBMS & CS-2004

Applicable to Courses: B.Tech CSE, IT, CSSE and ESCE

Full Marks=20

Time:1 Hour

SECTION-A(Answer All Questions. All questions carry 2 Marks)

Time:20 Minutes

(5×2=10 Marks)

<u>Questi on No</u>	<u>Question Type(MC Q/SAT)</u>	<u>Question</u>	<u>Answer Key(if MCQ)</u>	<u>CO Mapp ing</u>
<u>Q.No:1 (a)</u>		A data dictionary doesn't provide information about A. Data location B. Ownership of the data C. Disk size D. None of these	C	
		Hierarchical model is based on ____ structure. A. Linked list B. Tree C. Graph D. None of these	B	
		_____ is not the responsibility of DBA. a. Back-up of database b. User management c. Data authorization d. None of these	D	
		The distinguishable parts of a record are linked to A. Columns B. Rows C. Files D. None of these	A	
<u>Q.No:1 (b)</u>		In a hospital, a doctor may treat many patients. However, a patient can be treated by only one doctor. Further, every patient must be assigned to a doctor however the same is not mandatory for every doctor. Which one of the following correctly represents the cardinality and participation for the relationship between faculty and course? a) 1:1, total, partial	C	

		b) 1:1, partial, partial c) 1:M, partial, total d) 1:M, total, partial		
		<p>A departmental store maintains a database to store the details of its customers, products, and vendors. A Customer can purchase many products. Similarly, a product can be sold to many customers. Every vendor must supply at least one product to the store whereas every product must be supplied by at least 1 vendor. Which one of the following statements is TRUE?</p> <p>a) The cardinality of purchase relationship is 1:M</p> <p>b) The cardinality of purchase relationship is M:N</p> <p>c) The participation of Vendor entity type is partial.</p> <p>d) The participation of Product entity type is partial.</p>	B	
		<p>A shipping portal allows a sailor to book a boat for some purpose. Each sailor has a unique id, name, age, gender, and rating. Similarly, each boat consists of a unique id, color, and type. The portal maintains a reservation table to store the details of booking made by any sailor for a boat. The reservation tables consist of the attributes like sailor id, boat id, price of booking, and booking date. Which one of the following is not true about the above scenario?</p> <p>A. Sailor id is the primary key of sailor table.</p> <p>B. Boat id is the primary key of boat table.</p> <p>C. Both sailor id, and boat id are the foreign key in the reservation table.</p> <p>D. Either Sailor id or boat id individually can be the primary key of the reservation table.</p>	D	
		<p>Which is correct?</p> <p>I. NULL value is an entry in all the domains.</p> <p>II. All candidate keys are not super keys.</p> <p>III. Surrogate keys are same as foreign keys.</p> <p>A. I</p> <p>B. II</p> <p>C. III</p> <p>D. All</p>	A	
Q.No:1 (c)		<p>Which is not correct?</p> <p>I. For M:N relationship, primary key</p>	C	

		<p>of the relationship set consists of the union of the primary keys of the entity sets.</p> <p>II. For 1:M relationship, primary key of the relationship set is the primary keys of the many side entity.</p> <p>III. For 1:1 relationship, primary key of the relationship set consists of the union of the primary keys entity sets.</p> <p>A.I B.II C.III D.None</p>		
		<p>Which is correct?</p> <p>I.If every entity must participate in the relationship, then participation of the entity set in that relationship type is total.</p> <p>II.The partial key of a weak entity set is not same as a discriminator.</p> <p>III.Generalization is same as specialization.</p> <p>A.I B.II C.III D. None</p>	A	
		<p>I.In disjoint constraint, an entity belong to only one lower-level entity set.</p> <p>II.ER model is that it cannot express relationship among relationships.</p> <p>III.Foreign key cannot be represented in ER diagram.</p> <p>Which is correct?</p> <p>A.I B.II C.III D.All</p>	D	
		<p>Which one of the following option is correct consider the following statements.</p> <p>(i) An attribute of an entity can be multi-valued in ER model.</p> <p>(ii) In a row of a relational table, an attribute cannot have NULL value.</p> <p>(iii)Composite attribute is same as multi-valued attribute.</p> <p>(A) i (B) ii (C) iii (D) None</p>	A	

Q.No:1 (d)		<p>Which among the following is correct?</p> <p>I. Cartesian product includes all the possible combinations of tuples from both relations.</p> <p>II. Division operation is the not reverse of the Cartesian product operation.</p> <p>III. Difference operation is used to identify the rows that common to both relations.</p> <p>A. I</p> <p>B. II</p> <p>C. III</p> <p>D. None</p>	A	
		<p>Which of the following is correct?</p> <p>I. In the inner join, tuples with NULL valued does not appear in the result.</p> <p>II. Natural join is same as self join.</p> <p>III. Natural join operation is not needed for outer join.</p> <p>A. I</p> <p>B. II</p> <p>C. III</p> <p>D. ALL</p>	A	
		<p>I.NULL value will not participate in the aggregate functions.</p> <p>II.In theta join, cardinality of result is greater than product of cardinality of two relations.</p> <p>III. Self join in similar to theta join.</p> <p>Which is not correct?</p> <p>A.I</p> <p>B.II</p> <p>C.III</p> <p>D.None</p>	C	
		<p>I. Relational calculus is a procedural language.</p> <p>II.A variable is said to be bind in an atomic formula if it does not contain an occurrence of a quantifier.</p> <p>III.Domain variables are the ones which range over the underlying domains instead of over the relations.</p> <p>Which is correct?</p> <p>A.I</p> <p>B.II</p> <p>C.III</p> <p>D.None</p>	C	
Q.No:1 (e)		<p>The SELECT statement, that retrieves all the columns from empinfo table name starting with d to p is</p> <p>A. SELECT ALL FROM empinfo WHERE</p>	D	

		<p>ename like '[d-p]';</p> <p>B. SELECT * FROM empinfo WHERE ename is '[d-p]';</p> <p>C. SELECT * FROM empinfo WHERE ename like '[p-d]';</p> <p>D. SELECT * FROM empinfo WHERE ename like '[d-p]';</p>		
		<p>Find the names of these cities with temperature and condition whose condition is neither sunny nor cloudy</p> <p>A. SELECT city, temperature, condition FROM weather WHERE condition NOT IN ('sunny', 'cloudy');</p> <p>B. SELECT city, temperature, condition FROM weather WHERE condition NOT BETWEEN ('sunny', 'cloudy');</p> <p>C. SELECT city, temperature, condition FROM weather WHERE condition IN ('sunny', 'cloudy');</p> <p>D. SELECT city, temperature, condition FROM weather WHERE condition BETWEEN ('sunny', 'cloudy');</p>	A	
		<p>Which of the following option is correct if you wish to modify the “FirstName” column in “Employee” table from “Alex” to “Alec”.</p> <p>A. UPDATE Employee SET FirstName = 'Alec' WHERE FirstName = 'Alex'</p> <p>B. UPDATE Employee SET FirstName = 'Alec' INTO FirstName = 'Alex'</p> <p>C. UPDATE Employee where FirstName = 'Alec' WHERE FirstName = 'Alex'</p> <p>D. UPDATE Employee having FirstName = 'Alec' WHERE FirstName = 'Alex'</p>	A	
		<p>For the command:</p> <p>Select substr('Education',4) from dual;</p> <p>Select the correct output form the following options:</p> <p>A. tion</p> <p>B. cation</p> <p>C. Educ</p> <p>D. The command will generate error</p>	B	

SECTION-B(Answer Any One Question. Each Question carries 10 Marks)

Time: 30 Minutes

(1×10=10 Marks)

<u>Question No</u>	<u>Question</u>	<u>CO Mapping</u>
<u>Q.No:2</u>	<p>A. Suppose you have a classical music collection consisting audio songs and video songs, and you want to build a database that will let you find which recording you have for a specific composer (e.g. A.R. Rahman), or singer (e.g. Kumar Sanu), or film (e.g. Dangal) etc. Take necessary assumptions and draw an ERD for this database. (4 marks)</p> <p>B. Convert the ER model to relational model (3 marks)</p> <p>C. “An entity set can be better expressed in relationship set in some scenario”. True or false? Justify your answer with example. (3 marks)</p>	
<u>Q.No:3</u>	<p>Student(<u>sid</u>, sname, cgpa, age) Professor(<u>pid</u>, pname, subject) Teach(<u>sid</u>, <u>pid</u>) Write the queries in tuple relational calculus and domain relational calculus.</p> <p>A. Find the name of the students who has cgpa greater than 9.0 and age less than 20.</p> <p>B. Find the name of the professor who is teaching the subject DBMS as well as OS.</p> <p>C. Find the name and id of the students who have taken the subject machine learning as well AI.</p> <p>D. Find the name of students who are taken atleast 2 subject.</p> <p>E. Find the id and name of professor who is teaching atleast 2 subject.</p>	
<u>Q.No:4</u>	<p>Attend Choice I OR Choice II</p> <p>Choice I: Consider the following relational database schema: STUDENT(<u>rollno</u>, name, age, cgpa, address, semester, gender, class representative)</p> <p>Write the following queries in SQL and relational algebra.</p> <p>A. Display the rollno, name, for all male students either in semester 1 or 2 and have cgpa above 9.0.</p> <p>B. Display the details of the student above 20 years of age and belongs to ‘Bhubaneswar’.</p> <p>C. Display the rollno, name, and semester of students whose name contains ‘Z’ and male student.</p> <p>D. Display the rollno of the students who are not class representative.</p> <p>E. Display the details of the students who have highest cgpa for all semesters.</p> <p>OR</p> <p>Choice II: A. Prove the three fundamental Armstrong’s axioms.</p>	

	<p>(4 marks)</p> <p>B. Let $R(UVXY)$ be a relation schema with a set of functional dependencies, $F=\{UV \rightarrow X, U \rightarrow V, VY \rightarrow XU, Y \rightarrow X\}$. Compute a canonical cover of F. Show the intermediate steps of your derivation. (6 marks)</p>																						
Q.No:5	<p>A. Draw ER Diagram for a bank database, following are the requirements:</p> <ul style="list-style-type: none">■ Each bank has a unique code, name and address.■ Each bank has one or more branches, each of which has a branch_number and address.■ Each bank branch has zero or more loans and zero or more accounts.■ Each account has a unique account number, type and balance. It is related to exactly one bank_branch and to atleast one customer.■ Each loan has a unique loan number, amount and type. It is also related to exactly one bank_branch and to at least one customer.■ Each customer has a unique SSN, name, address and phone and is related to zero or more accounts and zero or more loans. <p>(7 marks)</p> <p>B. Convert the ER model to relational model. (3 marks)</p>																						
Q.No:6	<p>Suppose there are two relations A and B</p> <p>Relation A:</p> <table><tr><td>X</td><td>Y</td></tr><tr><td>Φ</td><td>a</td></tr><tr><td>Φ</td><td>b</td></tr><tr><td>Φ</td><td>c</td></tr><tr><td>ϵ</td><td>a</td></tr><tr><td>ϵ</td><td>b</td></tr><tr><td>Ω</td><td>a</td></tr><tr><td>Ω</td><td>b</td></tr><tr><td>Π</td><td>a</td></tr></table> <p>Relation B</p> <table><tr><td>Y</td></tr><tr><td>a</td></tr><tr><td>b</td></tr></table> <p>A. What will the resulting relation of $A \div B$ contain?</p> <p>B. Write the syntax for the query Tuples that are present in A but not in B. Also write the resulting relation that will be obtained.</p> <p>C. What will be the resulting table for A left outer join B.</p> <p>D. What are the tuples of $(A-(A-B))$ resulting table?</p> <p>E. What will be the tuples of resulting table for A natural join B?</p>	X	Y	Φ	a	Φ	b	Φ	c	ϵ	a	ϵ	b	Ω	a	Ω	b	Π	a	Y	a	b	
X	Y																						
Φ	a																						
Φ	b																						
Φ	c																						
ϵ	a																						
ϵ	b																						
Ω	a																						
Ω	b																						
Π	a																						
Y																							
a																							
b																							
Q. No:7	<p>Attend Choice I OR Choice II</p> <p>Choice I:</p>																						

	<p>Consider the table LAPTOP (model, Processor, RAM, manufacturing date, price). Write the SQL statement for the queries given below.</p> <p>A. Display the details of the LAPTOP where L comes in the middle of model name.</p> <p>B. Display the model of the LAPTOP where price is between 30000 to 100000.</p> <p>C. Display the RAM from LAPTOP where price is NULL.</p> <p>D. Display the details of LAPTOP where price is 30000/40000/50000.</p> <p>E. Group the models of LAPTOP according to the price.</p> <p>OR</p> <p>Choice II:</p> <p>A. There is a relation R(A,B,C,D,E,F,G). Consider the following functional dependencies AB → CD, AF → D, DE → F, C → G, F → E, G → A Find the candidate keys.</p> <p>B. There is a relation R(X,Y,Z) The following is the instance</p> <table border="1"> <tr> <th>X</th><th>Y</th><th>Z</th></tr> <tr> <td>a</td><td>d</td><td>b</td></tr> <tr> <td>a</td><td>e</td><td>c</td></tr> <tr> <td>a</td><td>f</td><td>c</td></tr> <tr> <td>c</td><td>g</td><td>b</td></tr> </table> <p>Find from below functional dependencies, which are correct and which are wrong.</p> <p>XY → Z Z → Y YZ → X Y → Z X → Z XZ → Y Y → X</p>	X	Y	Z	a	d	b	a	e	c	a	f	c	c	g	b	
X	Y	Z															
a	d	b															
a	e	c															
a	f	c															
c	g	b
